Oswaldo Cruz Institute (CHIOC), a checklist of the helminth parasites of carnivore mammals from Brazil was generated. In addition to published records, a total of 892 parasite specimens samples stored in the CHIOC from 1901 to 1996, were examined. The checklist follows the classification and systematic arrangement of

Zootaxa, Checklist of helminth parasites in wild carnivore ...

The two major groups of helminth parasites are the roundworms (Nematoda) and the flatworms (Platyhelminthes). Nematodes are common intestinal parasites often transmitted through undercooked foods, although they are also found in other environments. Platyhelminths include tapeworms and flukes, which are often transmitted through undercooked meat.
