Sensor and Transducer Definitions. The words sensors and transducers are widely used in association with measurement systems. The sensor is an element that produces signals relating to the quantity that is being measured. According to Instrument Society of America, "a sensor is a device that provides usable output in response to a specified ...

Introduction to Sensors and Transducers, Differences ...

One of the significant difference between the sensor and the transducer is that the sensor senses the physical changes occur in the surrounding whereas the transducer converts the physical quantity or nonelectrical into another signal or electrical signal.

2. Discuss the working principle of various types of sensors. 3. Identify the appropriate sensor for the measurement of parameters. 4. Analyze the sensor output and do the appropriate/ necessary conversions. 5. Demonstrate theoretical, practical and soft skills by working in the laboratory to test transducers and instruments

TRANSDUCERS AND INSTRUMENTATION - I

State description of transducers The steady state description - reveals characteristics of transducers Note! No transducer is sensitive to one physical energy only Consider a small volume dV in which transducer is placed The energy content dW in this volume contains the summation of all possible energies li - intensive quantity (can carry power, e.g., force, pressure, voltage)
